

DENVER, NC – March 26, 2025 – UNOX, a global leader in commercial oven technology, announces the U.S. launch of CHEFTOP-X™, its most advanced combi oven to date.

CHEFTOP-X was developed over three years by a team of engineers, physicists, chemists and chefs. It is designed to deliver greater efficiency, precision and ease of use. The oven was unveiled at the NAFEM Show 2025, giving foodservice professionals an exclusive look at its advanced capabilities.

Features include Digital.ID™, an advanced operating system with a customizable touchscreen interface, AI-powered cooking assistance, and cloud connectivity for remote monitoring and management. Additional innovations include HEY.Unox voice control and the OPTIC.Cooking system, which automatically recognizes food and selects the appropriate cooking program.

“CHEFTOP-X represents years of research and development aimed at redefining the relationship between chefs and equipment,” said Derrick Richardson, UNOX president of North America. “By integrating cutting-edge technology with intelligent automation, this combi oven optimizes cooking performance while simplifying operations.”

CHEFTOP-X is designed with SMART.Energy™ technology, an intelligent system that actively monitors and adjusts energy consumption in real time to minimize waste and reduce CO₂ emissions. The oven also provides personalized recommendations to help operators improve efficiency, such as alerts when the door remains open for extended periods.

Enhanced insulation technology and optimized airflow further contribute to energy savings, while the oven’s self-cleaning functions and ergonomic hand shower streamline maintenance and water usage.
