AUSTIN, TEXAS – September 7, 2022 – Dover Fueling Solutions (“DFS”), a part of Dover Corporation and a leading global provider of advanced customer-focused technologies, services and solutions in the fuel and convenience retail industries, is thrilled to announce the launch of its brand-new, high-powered, ultrafast Electric Vehicle (EV) Charging System – the Power UX™ 180 EV Charging System - in Europe.

The DFS Power UX 180 EV Charging System is specifically designed with a very small footprint to fit onto even the tightest of forecourts with sleek charge posts connected to a central power cabinet, which can be placed outside the forecourt area. This space optimized design presents site owners with more opportunities to incorporate EV charging onto their sites to attract EV drivers. The Power UX EV Charging System uses dual power distribution to deliver up to 180kW of energy to one EV charge post or simultaneously to two posts in power stacks of 90kW. The Power UX 180 EV Charging System is designed with reliability in mind, offering an enhanced user experience with ultrafast power output enabling EV drivers to obtain 100km of driving from less than 10 minutes of charging. The pioneering design of these high-powered DC Fast Chargers will provide the industry with a solution that is capable of delivering – safely and securely – rapid top-up in high transit locations.
The Power UX 180 EV Charging System is perfect for use at fuel retail locations, commercial and retail parking areas, and workplace environments. This EV charging system is compliant with applicable industry standards and interoperable with applicable CPMS platforms using OCPP for remote management and monitoring.

DFS Product Marketing Director of EMEA, Soren Powell-Holse commented, “DFS is committed to offering products and solutions that support our customers diversified energy requirements. The new Power UX 180 EV Charging System is a clear commitment to clean energies and our announced strategy of support for fuel retailing customers with products and solutions for whatever energy they choose to retail.

David McGuinness, DFS Director of Product Management, EV Charging, added, “DFS is truly enabling the forecourt industry in their energy transition with EV charging, alongside clean fuel dispensers and we are very excited to be able to bring this product to the market.”

These brand-new charging systems will be introduced at eMove 360 – the 6th international trade fair for mobility 4.0 – in Berlin, Germany from 5th – 7th October 2022. This exhibition is the world’s largest trade fair for mobility – electric, connect, autonomous. eMove 360 presents the full range of future-oriented and sustainable mobility solutions, from urban & mobile design, material and process solutions, from automated driving and electronics to infotainment – making it the perfect platform to launch two innovative and brand-new EV charging systems to the market.

At the exhibition visitors can expect to see first-hand how this new EV Charging System is the ideal solution for high-transit locations where space is at a premium. DFS is looking forward to welcoming customers and industry partners to stand 413 in hub 27, at Messe Berlin.
