

Veeder-Root Announces Liquid Level Measuring Sensors

Simsbury, CT, May 2, 2024 – Veeder-Root, a worldwide leader in fuel management and environmental systems technology, announced today new Liquid Level Measuring Sensors that have been added to its portfolio. These new sensors offer simple detection and remote monitoring in Aboveground Storage Tanks (ASTs), perfect for Commercial & Industrial applications.

The Liquid Level Measuring Sensors include a remote dashboard to view information such as inventory levels, delivery alerts, fill alerts, and more. The sensors are easy to install in existing riser openings or directly onto plastic tanks without the need for a riser, are CE Conformance and ROHS Compliant, and come with a 1-year warranty.

“These sensors are accurate, reliable, and programmable for data reporting intervals and alarms,” said David Nelligan, Global Product Manager for Veeder-Root. “They offer remote liquid level monitoring for fuel, lubricants, additives, DEF, and more.”

The available Liquid Level Measuring Sensors product line includes two sensor technologies:

- **Ultrasonic:** Works by sending out a sound wave at a frequency above the range of human hearing. The transducer of the sensor acts as a microphone to receive and send the ultrasonic sound.
- **Radar:** Emits a single, short pulse of microwave/electromagnetic waves and measures the time for the pulse to travel to the material and back.
