

FOR IMMEDIATE RELEASE

See What's New from OPW Retail Fueling at the 2025 PEI Convention

Smithfield, NC, September 18, 2025 — [OPW Retail Fueling](#), a global leader in fluid-handling solutions, will highlight its latest offerings at Booth S4131 at the 2025 PEI Convention at the NACS Show, which will be held from Oct. 14-17 at McCormick Place in Chicago, IL.

During the convention's three-day expo, OPW Retail Fueling will continue its tradition of showcasing industry-leading innovation in fueling equipment design, featuring a robust collection of advanced fueling system products. The lineup at Booth S4131 will include:

- **[71SO Segmented Overfill Valve](#)**: The new 71SO Segmented Overfill Valve retains the breakthrough two-stage positive shut-off mechanism of the original OPW 71SO while simplifying storage and shipping. By dividing the drop tube into four interlocking sections, the modular design allows for more compact packaging and easier transport. The 5-foot package eliminates shipping damage and overlength shipping fees. Installers can easily piece together the drop tube on-site without the need for glue or epoxy.
- **[DSE Commercial Dispenser Tops](#)**: Designed for use in commercial and fleet applications – including Gasboy AtlasX, Wayne Select™ and Helix Narrow (2000 and 4000 models) dispensers – the new DSE Commercial Dispenser Sump provides a cost-effective, dependable and quality fiberglass sump for the most common commercial dispensers. These new tops allow customers to utilize the existing DSE base made from Sheet Molding Compound (SMC), which produces versatile, reliable, consistent fiberglass sumps with a short lead time. These commercial tops add yet another option to the many sump configurations that can be used with the DSE base – one sump base, multiple applications.
- **[68EZSB Reconnectable Swivel Breakaway](#)**: The 68EZSB features a compact, lightweight design that incorporates 360° swivel rotation at both the male end and middle joint. The increased “swivelability” of the 68EZSB, along with its ability to be reconnected easily at waist height with only approximately 5 lbs. of reconnection force (this is 30% less force than previous models), helps the 68EZSB surpass the engineering of competing swivel breakaways. The swivel breakaway allows the removal of a whip hose, reducing hose cost and eliminating two potential leak points.
- **[Next Generation OPW 11® Series Nozzle](#)**: The nozzle trusted by retail and commercial filling applications across the world for over 40 years to allow the safe refueling of vehicles is getting even better. OPW Retail Fueling will reveal the next evolution of this industry icon at Booth S4131 at the PEI/NACS Show.
- **[FlexWorks Vent Piping](#)**: This flexible double-wall vent-pipe solution is UL and ULc-listed for use with both tank-venting and Stage II vapor-recovery piping, and with all fuel types and alcohol blends in underground storage tank systems. FlexWorks Vent Piping eliminates the need for hand-built field-fabricated joints and enables continuous piping runs between tank and vent stacks. And this piping can be paired with the new OPW VSE Vent Transition Sump to offer the best solution in venting underground storage tanks. To learn more, visit Booth S4131 for in-depth hands-on discussions about the benefits of FlexWorks Vent Piping.

“Fuel retailers need practical solutions to complex challenges,” said Ed Kammerer, Vice President Global Product Marketing, OPW Retail Fueling. “Fueled By Excellence,” it is our mission to continue to lead product development that optimizes multiple types of fuel storage, handling and dispensing. We look forward to showcasing that at PEI/NACS.”

About OPW Retail Fueling

[OPW Retail Fueling](http://opwglobal.com/opw-retail-fueling) is Fueled By Excellence through innovations designed to enhance safety, reliability, efficiency and business performance for the retail-fueling industry. Specifically, OPW Retail Fueling makes aboveground and underground fuel-handling products for both conventional, vapor-recovery and clean-energy applications in the retail and commercial fuel markets. OPW Retail Fueling is part of OPW, a leading equipment manufacturer in the retail-fueling, clean-energy, fluid-handling and vehicle wash industries. OPW has manufacturing operations in North America, Europe, Latin America and Asia Pacific, with sales offices around the world. OPW is part of Dover Corporation. To learn more about how OPW Retail Fueling is Fueled By Excellence in each of its markets, please visit opwglobal.com/opw-retail-fueling.
