OPW Vehicle Wash Solutions Brands PDQ and Belanger Will Exhibit at Upcoming PEI/NACS Show in Chicago

De Pere, WI – October 5, 2021 – [OPW Vehicle Wash Solutions](https://www.opwvehiclewash.com), whose PDQ and Belanger product brands are leading manufacturers of in-bay automatic and tunnel vehicle wash systems, is pleased to announce that it will be exhibiting in Booth 3531, Hall A, South Building at the upcoming PEI/NACS Show, Oct. 5-8, 2021 at McCormick Place in Chicago, IL.

OPW Vehicle Wash Solutions will be featuring the following systems and equipment at its booth:

- **PDQ [LaserWash® 360 Plus In-Bay Automatic Car Wash](#):** This wash system establishes a new performance standard through its Smart 360™ Technology, which enables the wash to “think for itself” and be responsive to the dynamic conditions in the wash bay. The Smart 360 Cleaning System provides better wash coverage through the use of rounded arch corners, optimized chemical-application timing and tilting arch functions. The Smart 360 Arch Control System provides a relaxing entry into the wash bay with quicker throughput rates by moving around the complete vehicle perimeter for more thorough coverage. The integrated Smart 360 Drying System offers the unique FlashDry service that streamlines the amount of time needed to perform basic drying functions. All the Smart 360 features can be managed and monitored through the system’s Smart 360 Networking capabilities. This consists of an easy-to-use web-browser interface that allows wash operators to access all key operating functions and reports from anywhere in the world. It also enables the operator to change wash packages, view performance and trend reports, and monitor all machine functions with a few clicks of a mouse and no special software required.
- **Belanger [Cube® Soft-Touch In-Bay Automatic Wash System](#):** The reigning Car Wash/Forecourt winner in CSP magazine’s 17th Annual Retailer Choice Best New Product Contest, the Cube utilizes slow-spinning friction wheels and Belanger’s ShineMitt foam media to reduce noise levels while thoroughly cleaning the vehicle with gentle brush passes. The Cube features a host of “smart” technology systems, allowing it to be precise, intuitive and flexible while providing the best possible cleaning result for each customer. Other features include remote-access capabilities; patented LED-enhanced wheels and spray arms that cycle through six colors to provide Active Site Marketing™; and an innovative scissor-arm top wheel that precisely lowers to the vehicle and covers more area along the front, top and rear. The Cube’s LED lights also provide navigational assistance to move customers in and out of the bay quickly and safely, increasing throughput.
- **Belanger [DryLite® Dryers](#):** These dryers use color-changing LED illumination to turn the wash exit into a highly visible “beacon” that attracts current and new customers. There are four DryLite models available, two general purpose AirCannon™ models and two AirCannon models outfitted with SideKick™ vehicle side dryers. All DryLite dryers are easily configurable to meet the needs of the specific wash location, allowing the operator to select the number of nozzles and how to best position them, all with the simple loosening and tightening of a few bolts.

The PEI/NACS Show annually offers the most comprehensive representation of products and services for the convenience-store and retail-fueling industries. Historically, more than 23,000 people regularly attend the show from more than 70 countries, with upwards of 1,200 companies exhibiting.
